I- **Need Scalability, HA, SQL, ACID and PLSQL?**

DBAs and Developers

Learn

About Oracle's new scale-out SQL RDBMS, the World's Fastest OLTP Database.

How to install, configure, and tune this database using JDBC, ODBC, OCI, PLSQL, Python, R-Oracle, Ruby and Golang.

How Oracle achieved better performance than all known SQL and NoSQL databases.

How to perform OLTP, IoT, Machine Learning and analytic workloads in the same database

PRESENTER: Douglas Hood

Doug has worked at Oracle for 23 years as a consultant, developer and product manager. Doug presents on high performance, highly available databases in the USA, London, Germany, France, South Korea, Brazil, Canada, Costa Rica, Panama and Guatemala.

II- **An Introduction to Virtual Reality Data Analytics**

Two-dimensional data visualizations have their drawbacks for analysts to gain insights when analyzing large datasets or those with many data dimensions. This session will explain how datasets can be explored in virtual reality to help facilitate better insights. Both commercial and open source software technologies will be explored.

PRESENTER: Suzanne Prezorski

Suzanne Is a technical lead with over 20 years of industry experience working on software development and business intelligence systems for Telecommunications and other technology companies. Her functional experience extends to Marketing & Advertising, HRIS and Financial & Logistics Systems.

SECURITY: *Please bring a photo ID with you.*

Note: *Complimentary Food and refreshments will be served.*
